

Seamed metal roof | clamping system top-fix

Single-rail clamping system with modules installed in portrait

Perfect for seamed metal roofs

- excellent module rear ventilation
- installation-friendly clamps with a click-in mechanism
- components usable across different roof types
- quick and efficient mounting from above with easily graspable
- components

product variants

- also suitable for standing seam roofs made of copper
- seam clamps for standing seam and round seam
- rails and clamps available in blank and black anodized

Your benefits

- only a handful of components – entirely pre-assembled
- centric load distribution
- C-rail also acts as a cable channel
- quick mounting from above with easily graspable components

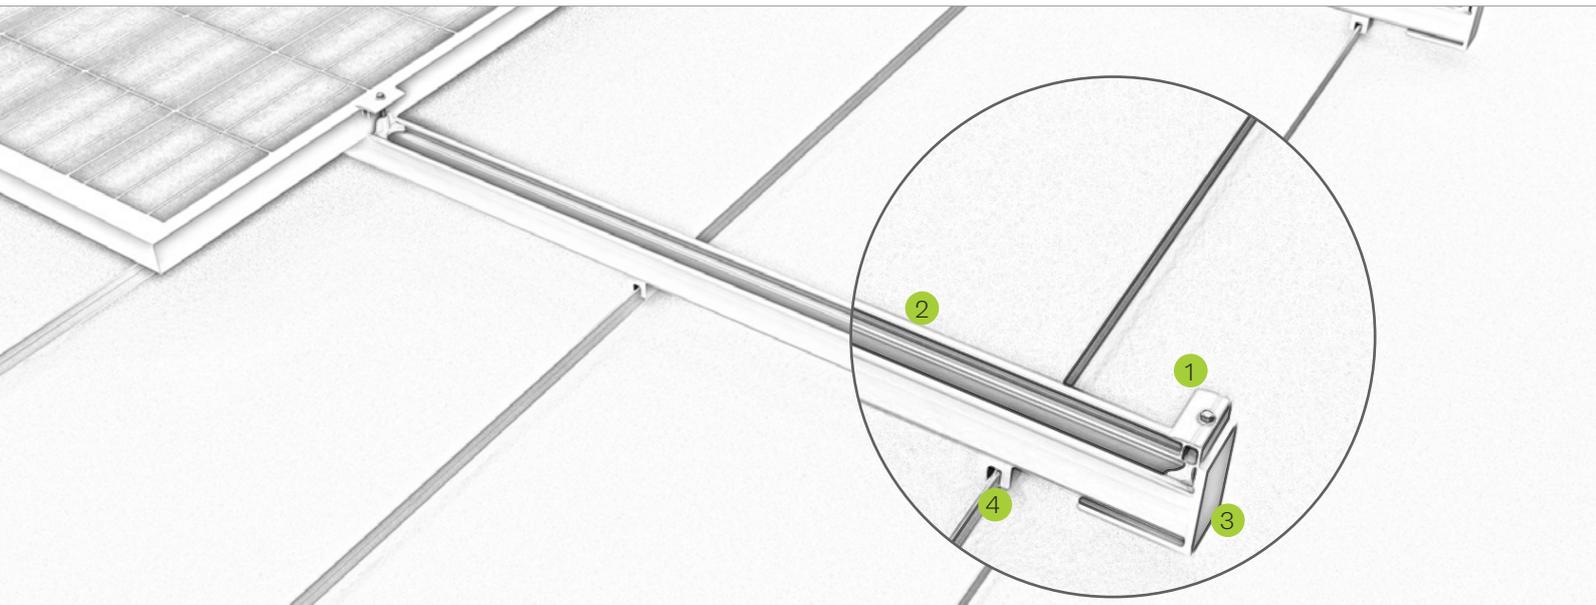

Rounded seam clamp

Centric load distribution in to the seam clamp

C-rail as cable channel
